Special Issue Introduction
The pathophysiology of cerebral aneurysms is complex and multifactorial. Inflammation has been shown to be an important contributor to the pathogenesis of cerebral aneurysms. Herein, we have assembled a collection of articles from renowned experts in the field of cerebrovascular disease, in order to clarify the current understanding of the role of inflammation in the formation, progression, and rupture of cerebral aneurysms, as well as to delineate future directions for continued investigations.

Benefits
Open Access: the full-text of each published article can be accessed and downloaded from the journal website without any fee.
Rigorous Peer Review: we strictly follow international guidelines (COPE Ethical Guidelines for Peer Reviewers) and ensure rigorous peer review process.
Worldwide Readership: the readers of the journal are from more than 175 countries worldwide.
Wide Promotions: all published articles will be promoted on academic conferences, social networks for scientists or other various channels.
